

Bill Woodhouse P.Eng.
Saint John District Councillor

I am proud to work and practice as a Professional Engineer in what I feel is an extremely rewarding and challenging field. As I continue to develop in my career, I have been considering how I can share my enthusiasm and interest in engineering with others. It is with this drive and consideration that I am offering my candidacy for the position of APEGNB Councillor - Saint John.

I received my Bachelor of Science Degree from UNB in Civil Engineering in 2009. Throughout my undergraduate degree, I developed a keen interest in the field of construction and general contracting where I continued to focus following the completion of my degree. In 2015, I completed a master's degree in Civil Engineering (Construction Engineering and Management) from UNB.

My professional work experience has been focused in the field of construction and general contracting. Since 2008 I have worked with a private general contractor/construction manager, FCC Construction (a member of the OSCO Construction Group of companies). Initially I worked as an estimator (2 years) before moving into my current role as a project manager, where I have worked for 10 years. As a project manager, I oversee all aspects of construction from the design stage through to project turnover. I have had the opportunity to work on wide range of projects throughout New Brunswick and Nova Scotia in my career and have had the pleasure of working with many talented and experienced professionals.

As a member of the APEGNB council I feel I could contribute and shape, in a positive way, the future of our profession. Through my professional career I have developed key leadership, collaboration, and teamwork skills that I feel would make myself a valuable member of council.
