

Joël Olivier, ing.
Northeast Councillor

Object: Application as Northeastern Representative

Graduated from the *École polytechnique universitaire de Lille* in France in civil engineering in October 2014, I arrived in New Brunswick, and more specifically in the Bathurst region, in June 2016. Since I worked to the recognition of my professional experience to obtain the title of Professional Engineer of the Association of Professional Engineers and Geoscientists of New Brunswick (APEGNB) and continue to work in the field of engineering by supervising projects related to public works and sustainable development.

Currently I am a project supervisor in sustainable development at the Association francophone des municipalités du Nouveau-Brunswick. My mission is to share and make accessible my engineering knowledges in order to communities can demonstrate good governance. I also make sure that awareness can contribute to the development of communities through social, environmental and economic aspects. I act in the public interest by taking these three factors into account when I am developing and carrying out projects.

Four years after my establishment in New Brunswick, I received a significant support from the community for my installation and integration in addition to the accompaniment of my engineering mentors when I registered with APEGNB as an engineer-in-training.

My participation at the activities of the Northeastern section of the Association for four years has allowed me to develop my knowledges on the role played by the engineering and geoscience communities at the regional level in order to continue the work carried out at the provincial level.

By now I wish to get involved in the engineering and geoscience communities by sharing my experience and knowledge acquired in Canada and abroad as representative of the Northeastern branch on the APEGNB Council member.

My educational and professional careers have led me to overcome various very enriching situations which in my opinion will be beneficial to the implementation of the strategic plan and will help to ensure compliance and improvement of the regulation of the professions of engineer and geoscientist in New Brunswick.

Best regards,
Joël OLIVIER, P.Eng.
